**DL3™**

**DO-C**  
MEDICINSK TEKNIK

The DL3 has been developed to be the tool of choice for the world's leading dermatologists. Precision-engineered and crafted from solid aluminium, it is the first handheld DermLite to integrate a 25mm four-element lens, which offers greatly reduced optical distortion and a sharper image across the field of view. Twenty-one high-powered LEDs produce approximately 30% more illumination in cross-polarised mode than the DermLite II HR, and seven non-polarised LEDs for immersion fluid dermoscopy create a brighter image than the equivalent mode in the DermLite II Hybrid. For optimum ease of use, one button does it all: A quick tap instantly toggles between polarisation modes, and a longer push turns the unit on or off.

A major step forward is the DL3's fully retractable faceplate spacer design and focusing mechanism. By twisting a large, precision dial that is as easy to turn when mounted on a camera as it is during regular use, you extend its faceplate spacer and focus your image with an available focal range in excess of +/- 4mm. The innovative spacer comes with a glass faceplate with 10mm scale, and due to its fully enclosed design, it is easy to clean and keeps the critical optical components completely sealed. Now, contaminants as well as undesirable ambient lighting no longer affects your image.

Of course, the DL3 is camera compatible. Attach your digital camera\* via the product's built-in threaded 28mm connection, extend the spacer, and start taking sharp, glare-free images quickly and easily. The same 28mm connection may be used to mount the included eyepiece, which may greatly improve the contrast of the image and helps reduce internal reflections caused by ambient lighting.

DL3 is powered by the same integrated, rechargeable lithium-ion battery used in the DermLite II series, which can be recharged via the included charging base. A DermLite DL3 will let you know when it's time for a recharge: While using a fully charged DL3, the "3" on the top of the unit lights up green; once the charge level drops below 25%, the "3" will glow orange.

DermLite DL3 combines the unique advantages of polarised and immersion fluid dermoscope in one truly refined device that offers superior illumination and optics, solid durability, and, with its ergonomic handle design and single button operation, a degree of convenience that is unsurpassed in a DermLite.

Each unit comes with 3Gen's 5-year warranty, includes a leather belt case, lithium battery and charging base, eyepiece and lanyard.

\* Select cameras only. Others require off-the-shelf adaptors
